DETAILED ACTION

Allowable Subject Matter

1. **Claims 1-2, 4-5, 9-12, 14-21** are allowed.

The following is a statement of reasons for allowance:

As for independent claims 1 and 14, they recite a method and apparatus for recognizing speech. Prior art such as Jiang, Ehsani, Kimura and Chou show a similar method and apparatus but fails to teach in combination the recited method and apparatus for recognizing speech wherein determining said one series of words comprises continuing determining words or combinations of words, which are consistent with said seed sub-phrase as at least a first successive sub-phrase which is contained in said received speech phrase, by inserting additional, paired and/or higher order information, including semantic and/or pragmatic information, between the sub-phrases, wherein said semantic information includes description of said sub-phrases and said pragmatic information includes connecting information connecting said sub-phrases to actual situation, application and/or action, wherein the predefined language model contains a low-perplexity recognition grammar obtained from a conventional recognition grammar by identifying and extracting word classes of high-perplexity from the conventional grammar, generating a phonetic, phonemic and/or syllabic description of the high-perplexity word classes, in particular by applying a sub-word-unit grammar compiler to them, to produce a sub-word-unit grammar to yield said low-perplexity recognition grammar and wherein a language model is used containing at least a recognition grammar built by a low-perplexity part and a high perplexity part, each of

which being representatives for distinct lo- and high-perplexity classes of speech elements wherein word classes are used as classes for speech elements or fragments, thereby decreasing the burden of searching.

Dependent claims 2, 4-5, 9-12 and 15-21 are allowed because they further limit their parent claims.
